Regulating Health +
Social Care Professionals

- Multi-profession Health and Social Care Regulator
- Republic of Ireland/ Member State European Union
- Young(ish) organisation
- Expanding list of professional registers (12 now & still growing)
- High proportion of internationally qualified professionals

Ireland – Small open economy

Total employment in Healthcare

Figure 3.4 Persons aged 15 - 89 years in employment classified by NACE Rev. 2 Economic Sector, Quarter 2 2021 and Quarter 2 2022

© Central Statistics Office, Ireland
<https://data.cso.ie/table/QLF03>

Projected requirements 2035

- Population growth to **5.4** million
- Aged **85+** will more than double
- Health and Social Care Professions need to increase by **2.3% - 3.3%** per annum to meet needs

Ireland & international mobility

- Not enough health & social care professionals trained domestically
- Growing demand for professionals in health and social care causing a reliance on internationally trained professionals

Barriers to international mobility

- Differences in scope of practice
- Complexity
- Time delays
- Access to information

Sustainable Regulation – The Big Picture

- The project is currently ongoing
- Re-design the governance structure of CORU
- Current model will become unsustainable & is creating an administrative burden
- Opportunity to improve access

Why Sustainable Regulation?

- Currently 12 Board established (9 open registers)
- Regulating 15 professions
- Each Board has 13 members who volunteer their time to CORU
- Board meeting scheduled at least every six weeks

Minister for Health

Sustainable Regulation Projections

Projections for 2024:

- Largest register opened Nov 2023, Social Care Workers
- 140 governance meetings
- 70+ statutory committee meetings
- 400+ individuals, voted in and working on a voluntary basis

Why Sustainable Regulation?

- Year on year increase in applications for Registration, Recognition, Education Programme Approval, FTP & Appeals
- The variety of work required of the executive is increasing
- Public expectations of CORU have increased

Recognition of international qualifications

- Professional qualifications awarded outside the State are assessed through a process of 'recognition'.
- Directive 2005/36/EC
 - SI 8 2017
 - CORU Recognition Policy

- Currently, the EU process is employed by CORU for recognising all qualifications awarded outside the State
- Done in the interests of fairness and equality
 - May not be the right approach

Recognition Process

- 'General System'
- Individual portfolio review/case-by-case basis
- Comparison of the qualification (and relevant lifelong learning) with the standard of proficiency required of approved Irish qualifications
- Substantial differences/deficits = compensation measures

Process issues

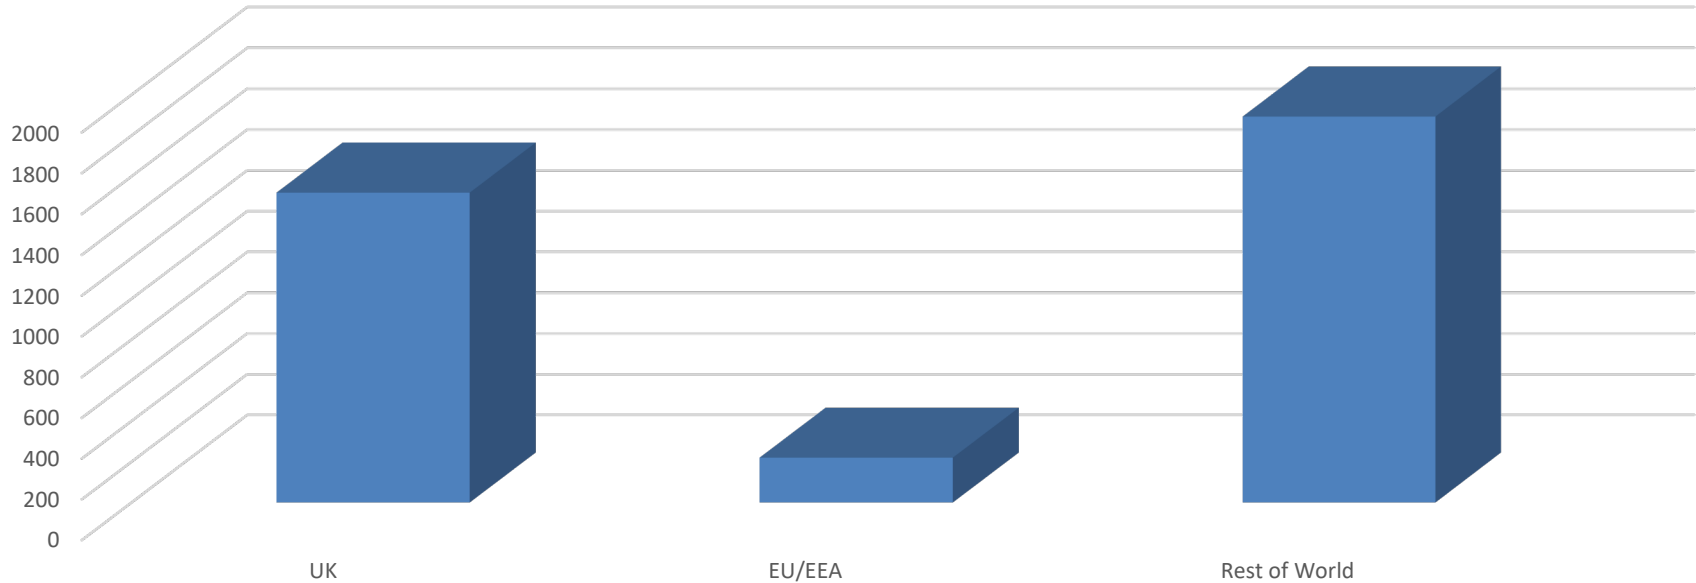

- Resource intensive, time consuming & disproportionate
- Demand is rising rapidly (doubled last year, set to triple this year)
- Ireland is competing to attract internationally qualified Health and Social Care professionals.
- Need to achieve effective change and avoid becoming a barrier

Volume of applications for recognition of international qualifications

Global spread of CORU recognition applicants

'Region' of Qualification - changes 2019 to 2023 ytd

Recognition Projects

Frequently Seen Qualifications Pilot

- Could we take applicants with qualifications that:
 - 1) align well with the Irish standards of proficiency out of the standard application pathway,
 - 2) reduce documentation requirements and;
 - 3) remove requirement for assessment of each individual application?

- Over a period of 18 months, the Recognition Department implemented a pilot project to test the feasibility and potential impact of this initiative.

- Pilot ran from January 2022 – August 2023
- Aim – remove high volumes of applications that are seen frequently and have consistent, positive outcomes from the standard process.

Key Objectives

- Ensure public protection objective through identification and management of risk
- Reduce time taken to recognise qualifications
- Reduce resource requirements in terms of processing applications
- Improve efficiencies (process & cost)
- Improve applicant/professional experience
- Continue to develop expertise and leadership within CORU

Methodology

- Legal advice
- Research
- Empirical data
- Risk mitigation
- Review

Results

- Outcomes of the trial cases were as anticipated
- Reduced timeframe for decision for applications in pilot vs. standard process
- Reduced documentation requirements for applicants/professionals and higher education institutes
- Improved efficiencies (process & cost)

Challenges

- Communication/cooperation from some stakeholders

Conclusion

- The Frequently Seen Qualifications Pilot exhibited promising results, indicating the potential for reducing regulatory barriers on the Health and Social Care professionals who wish to have their international qualification recognised.

Compensation Measures Survey

2023 CLEAR ANNUAL EDUCATIONAL CONFERENCE

#CLEAR2023AEC

- Compensation Measures are intended to address situations where the level of training or qualification in the destination country is substantially different than that of the professional seeking recognition.
- Two compensation measure options
 - 1) the Period of Adaptation (POA) or;
 - 2) the Aptitude Test.

Recognition of International Qualifications Outcomes 2018 - 2022

■ Compensation Measure

■ Recognised

■ Recognised QUAL+

- Approximately **73% of applicants** who are required to complete a compensation measure before their qualification can be recognised for the purposes of registration **do not proceed with compensation measures.**

- With international mobility on the rise, recruitment of health and social care professionals increasing, and new professions to be regulated coming on stream; it is imperative that an accessible and robust compensation measure process is in place for those that require it.

- The Compensation Measures Stakeholder Survey was issued to stakeholders in December 2022 and closed in January 2023.
- Aim - to gather feedback on the current Compensation Measure process employed by CORU to better understand their perceptions and expectations of the process as well as any areas for improvement.

Key Objectives

- To improve the Compensation Measure process for stakeholders,
- To make Compensation Measure more accessible for applicants,
- To make the provision of Period of Adaptation placements an attractive and workable choice for potential supervisors and sites
- To make Compensation Measures an attractive and effective way of completing the learning required for practice in Ireland,

- To progress applicants to successful recognition and registration
- To ensure that applicants can recognise Compensation Measures for the opportunity they are intended to be
- To contribute to the working environments applicants operate in when undertaking Compensation Measures
- To streamline the process for the recognition team.

Methodology

- Stakeholder survey
 - online survey
 - separate survey be created for each stakeholder group
 - clear and concise survey questions – a mix of closed and open-ended questions as well as multiple choice, ranking etc.
 - Pilot of survey before launching

Findings

- Many barriers
 - Availability of POA sites & supervisors
 - Visa issues
 - Frequency of Aptitude Test availability
 - Documentation

What are we doing?

- New Compensation Measure manager
- Reviewing guidance documentation
- New application system in development
- More qualification assessment carried out in advance – identify deficits in advance to make applicants aware and allow them to prepare
- More aptitude tests procured
- Research into alternative routes for third country applicants underway

Conclusion

- The Compensation Measures Stakeholder Survey has provided valuable insights into CORU's stakeholders' perspectives of the Compensation Measures process. It has highlighted areas of strength and improvement that can help the process avoid becoming a regulatory barrier.

Ethical Recruitment – The backdrop

- Small open economy – highly dependent on international trade and labour
- Other initiatives = no compromise of ethical recruitment principles

Why must we consider ethical recruitment?

- Ethical recruitment – “A problem that not only affects the people but also the countries and *companies that want to do ethical work*”
- Laura Thompson, Deputy Director General of the International Organisation for Migration

Labour migration statistics

- 272 million global migrants in 2019
- 169 million of those were labour migration
- Migrant workers make an average 4.9% of a countries work force

Global Shortages

- The World Health Organisation (WHO) estimate the global healthcare shortage of 2.6 million in 2013
- The WHO also project a global shortage of 10 million healthcare workers by 2030

WHO Global Code of Practice on the International Recruitment of Health Personnel

Global in scope and includes a variety of direct, indirect, public and private stakeholders

Encourages incorporating ethical principles designed to strengthen developing countries

- 5.5 Sustain and retain
- 6.1 Data gathering to evidence base
- 6.2 Encourage development of information systems for better policies

How do we contribute to ethical recruitment principles?

- Being aware of the increased demand & global shortages
- Collecting & sharing data, forming evidence base and developing strategies to address needs
- Sharing both nationally and internationally
- Increasing awareness of the WHO code in our interaction with recruiters

Removing barriers whilst ensuring we do not compromise on ethics

- Need for effective workforce planning & engagement with other stakeholders
 - By collecting improved data to assist in workforce planning & sharing it
- By critically assessing our processes
 - Reviewing policies to ensure they reflect this
 - Process improvements
 - Projects

- continued need to balance the ethical and efficiency considerations that international mobility issues give rise to
- need to go beyond a simple linear “brain drain” argument to grasp the full implications of health professional mobility
 - rights of individuals to move
 - career development for individual health professionals,
 - possible financial benefit to source countries of remittances sent home by migrant health professionals
 - benefits when mobile health professionals return home with skills acquired abroad
