

VANPOOLING IMPACTS

Join the Movement: Vanpooling for a smarter, greener commute!

ABOUT THE VANPOOL COUNCIL

Throughout 2024 the council has focused on two primary themes: providing valuable resources for council members and attracting new members. As one of ACT's largest councils, with over 160 members, we aim to enhance engagement and promote knowledge sharing within the industry. Our initiatives include developing case studies, promoting the council at chapter meetings, and organizing Coffee Talks to facilitate knowledge exchange. Additionally, we are planning to host three regional webinars this fall to discuss vanpooling in both urban and rural markets.

REAL WORLD IMPACT

Vanpooling effectively addresses parking shortages, traffic congestion, and emissions issues by reducing the number of vehicles on the road. This leads to fewer miles traveled by commuters, significantly lowering the carbon footprint and improving local air quality. Each vehicle taken off the road through vanpooling saves an average of 17,095 pounds of carbon emissions annually, contributing to a healthier environment.

In 2020, vanpool programs maintained almost 90% of their ridership, the highest retention rate among all transportation modes. This resulted in 914 million miles traveled and prevented over 406,136 tons of carbon emissions from polluting our air.
