FOR IMMEDIATE RELEASE – November 13, 2026

FILMtech Introduces New CRYOMET™ and CRYNSULATE™ Products for Cryogenic and Low-Emissivity Insulation Applications

New metallized PET product families expand FILMtech's U.S.-based capabilities for multilayer and specialized thermal insulation.

BEAN STATION, Tenn. – FILMtech Inc., an industry leader in metallized, barrier and specialty films, announces the introduction of CRYOMET™ SS and CRYOMET™ SD metallized PET films, along with CRYNSULATE™, a texturized metallized PET film. To support the CRYNSULATE product line, FILMtech has recently invested in new equipment specifically designed to increase the surface area of metallized PET film through a proprietary texturizing process, expanding the company's manufacturing capabilities for multilayer insulation (MLI) and other specialized thermal insulation applications.

CRYOMET™ SS and CRYOMET™ SD are available in thicknesses ranging from 25g to 1000g, providing customers with a broad range of metallized PET options for MLI and thermal insulation constructions. CRYNSULATE™ is produced using 25g metallized PET and processed on FILMtech's new texturizing equipment to create its distinctive "crinkled" configuration.

The CRYOMET and CRYNSULATE product families provide reflective insulation properties that help manage radiant heat transfer. Applications include cryogenic storage and transfer systems, industrial gas equipment, MRI systems, aerospace applications, and other applications requiring thin, lightweight, low-emissivity metallized PET films.

ABOUT FILMTECH INC.

FILMtech Inc. is a U.S. manufacturer of metallized, barrier and specialty films serving the flexible packaging, insulation, aerospace, agricultural, printing, label, and industrial markets. From its manufacturing operations in Bean Station, Tennessee, FILMtech specializes in vacuum metallization, precision slitting and converting, and customized film solutions.
