Flexible Packaging

- > **Is Innovative**
- > **Is Widely Extendable into Diverse Product Categories**
- > **Protects Products During Transportation and Storage**
- > **Maintains and Indicates Freshness**
- > **Offers Consumer Conveniences**
- > **Provides Reclosure and Dispensing Options**
- > **Is Easily Transported and Stored**
- > **Creates Shelf Appeal**
- > **Enables Visibility of Contents**
- > **Provides Efficient Product-to-Package Ratios**
- > **Uses Less Energy**
- > **Creates Fewer Emissions**
- > **Creates Less Waste in the First Place®**

As one of the fastest-growing segments of the packaging industry, flexible packaging combines the best qualities of plastic, film, paper, and aluminum foil to deliver a broad range of protective properties while employing a minimum of material.

Typically taking the shape of a bag, pouch, liner, or overwrap, flexible packaging is defined as any package or any part of a package whose shape can be readily changed.

Flexible packages are used for consumer and institutional products and in industrial applications to protect, market, and distribute a vast array of products.

Leading the way in packaging innovation, flexible packaging adds value and marketability to food and non-food products alike. From ensuring food safety and extending shelf life to providing even heating, barrier protection, ease of use, resealability, transportation protection, and superb printability, the flexible packaging industry continues to advance at an unprecedented rate.

The life-cycle attributes of flexible packaging demonstrate many sustainable advantages. Flexible packaging starts with Less Waste in the First Place®, greatly reducing landfill discards. Innovation and technology have enabled flexible packaging manufacturers to use fewer natural resources in the creation of their packaging, and improvements in production processes have reduced water and energy consumption, greenhouse gas emissions, and volatile organic compounds (VOCs). Even more, lighter-weight flexible packaging results in less transportation-related energy and fossil fuel consumption and environmental pollution.

With its versatility, custom qualities, efficiency in conserving resources, and sustainability, there's no better time to consider flexible packaging for your new product line or as an upgrade to an existing package.

Let's **UNITE** for **FLEXIBLES**

Unite for Flexibles and Make Your Voice Be Heard!

Representing one of the fastest-growing segments in packaging, the Flexible Packaging Association (FPA) is the leading voice for industry advocacy, education, and networking. Offering unparalleled support to members of the flexible packaging industry, including converters, suppliers, academics, and more, we encourage you to become an essential part of the movement.

Through focused programs and services, FPA's mission is to amplify the voices of our members to build real growth for our members through effective advocacy, unique educational offerings, and outstanding networking opportunities.

CRITICAL ADVOCACY

Critical industry advocacy is backed by a strategic, proactive approach to making our voices heard at State Houses and on Capitol Hill.

ESSENTIAL NETWORKING

Essential networking opportunities, including FPA's Annual Meeting, FlexForward® Fall Conference, and more.

INDUSTRY INSIGHTS

Invaluable insights and research on the industry's most important initiatives that help to bolster your business and the greater flexible packaging community.

JOIN US

[Flexpack.org/Unite-For-Flexibles](https://flexpack.org/Unite-For-Flexibles)

To learn more about what an FPA membership can do for you, contact Emily Patten, Director of Membership and Meetings, at epatten@flexpack.org.

The Flexible Packaging Association is the U.S. association of the manufacturers of flexible packaging; and material or equipment suppliers to the industry. Flexible packaging is produced from paper, plastic, film, aluminum foil, or any combination of those materials, and includes bags, pouches, labels, liners, wraps, rollstock, and other flexible products.

AB Graphic International, a family-owned company since 1954, offers full solutions for the flexible packaging markets, including laminating, coating, pouch production, embellishment, finishing, and more. In addition, we manufacture machines for the shrink sleeve market to form, seam, inspect, and cut, and are the world's leading manufacturer in digital print finishing, traditional finishing, and turret rewinders. Our global team still maintains the same innate values of decency, integrity, and above and beyond service. We are one team that champions innovation and delivers bold and efficient solutions that add value to our customers.

sales@acscorporate.com

acscorporate.com

The ACS Group consists of the brands AEC, Cumberland, and Sterling. We design, manufacture, market, and support one of the most comprehensive lines of auxiliary products for the plastics processing industry.

Formed through a series of acquisitions, the ACS Group maintains an expansive product line, which includes size reduction equipment (granulators and shredders), material conveying equipment, metering and blending devices, heat exchangers (mold temperature controls units and chillers), drying systems, and presses. These products are marketed under such recognizable brand names as AEC, Sterling, Sterlco, Cumberland, Wabash, and Carver.

ACS Group offers a comprehensive product mix, which allows our company to be a solution provider, rather than just an equipment vendor, for a process-critical industry. The ACS Group offers technically superior products born from over 80 years of industry experience.

Today, the ACS Group goes to market through over 60 independent manufacturer's representatives, with certain direct sales efforts to select OEMs. With the ACS Customer Service Group, a customer can be confident that any after-sale needs, such as parts, technical support, on-site service, training, and, in the distant future, remanufacturing, will be quickly and accurately met. The ACS Customer Service Group is focused on having the right people and products in the right place and right time to ensure optimal production for our customers.

In 2003, Blaige Industry Analytics (BIA) started collecting packaging supply-chain industry intelligence in a variety of substrates (film, foil, fiber) and reporting the trade competitive dynamics and strategic developments. BIA is the industry's comprehensive packaging resource in terms of investment and strategic activity. Industry consolidation amongst North American packaging converters has been the key trend that is affecting all participants in the flexible packaging converting supply chain, including most of the FPA members, and understanding this trend is critical as it affects their vitality and success. Our 21-year consolidation study over two decades has uncovered significant trends in competitive dynamics and shifts in the packaging converting/supply chain competitive landscape. BIA also publishes special reports on consolidation trends within the segments specific to FPA members such as plastics, packaging, label, and contract manufacturing and packaging.

Recover Trapped Capacity in the Mounting Department — Before Adding Headcount.

Flexopodz® provides floor-mounted, high-density sleeve, plate, and ink storage systems for flexible packaging plants.

Most plants face constant pressure on space and labor, often driven by how sleeves, plates, and tooling are stored and accessed upstream.

Flexopodz® focuses on that constraint. By restoring visibility, flow, and control in the mounting department, plants routinely uncover six-figure annual capacity gains and often delay or avoid adding headcount.

Flexopodz® combines vertical sleeve storage, automated plate storage and retrieval, and RFID-enabled scheduling and inventory control.

A floor-mounted, rail-guided carriage architecture delivers safer, more stable operation than suspended or overhead carrier designs.

Systems are supported by purpose-built carts that reduce handling time and improve safety at key transfer points within the mounting workflow.

The result is a mounting department that supports growth by removing friction, not by adding people.

RKW North America is a leading manufacturer of high-performance specialty films used in flexible packaging, personal care, and industrial applications. Widely recognized and valued for a broad product range of highly engineered mono- and multi-layer films, RKW produces a broad portfolio of existing and customized films that deliver on customer requirements, with short lead times and exceptional customer service.

The company benefits from being part of a globally active group, with production plants in every major continent that have sustainability as a driving corporate strategy. That core driver is the continued development of sustainable film solutions (recyclable, biodegradable, bio-based, compostable, and downgauged, all including PCR/PIR, often in films designed for mono-material packages required for the current recycling stream. These core competencies uniquely position RKW to meet the dynamic requirements of our customers both today and in the future.

SCREEN, a leading provider of inkjet solutions, has expanded its portfolio to address a variety of label and packaging applications. The Trupress LABEL 350UV SAI Series enables short-run label production on multiple substrates using six colors plus a high-opacity white. A new jetted primer also allows UV printing on previously challenging substrates.

For the flexible packaging market, SCREEN's Truepress PAC 830F aqueous inkjet press aims to be a game-changer. Additionally, the new Truepress PAC 520P brings sustainability to the pouch market with paper-based printing using aqueous inks designed for food safety.

Overall, SCREEN's growing range of label and packaging solutions continue to offer printers increased ease and versatility in their production capabilities.

dana@smartsolve.com
smartsolve.com

SmartSolve is the only packaging-technology company that pioneers certified, bio-based, water-soluble materials for people who care about the planet. With a vision to transform packaging into something more than just trash, SmartSolve is assisting its global customer base to create zero-waste packaging. SmartSolve Industries is a privately held company located in Bowling Green, Ohio. Recently, on October 1, 2025, SmartSolve launched PureNil™ 0, the world's first plastic-free, 100% bio-based, and flushable packaging substrate. For decades, flexible packaging has been dominated by multi-layer laminates and plastic films that are notoriously difficult to recycle, leaving brands with few options and consumers with guilt. PureNil™ 0 eliminates this compromise: It is entirely plastic-free, fossil-fuel independent, and naturally biodegradable, empowering companies to align with their sustainability commitments authentically.

TOPPAN USA Inc. is a leading global manufacturer of transparent high-barrier film. TOPPAN USA's GL FILM is used for a wide range of applications in the food and beverage, personal care, medical, and industrial sectors. GL FILM's history spans over 30 years, and it is used in more than 15,000 products across 45 countries.

TOPPAN USA was established in 2014 in Griffin, Georgia, as TOPPAN's first transparent barrier film manufacturing site outside Japan. Our business has grown significantly thanks to a strong flexible packaging market for our films and close relationships with customers.

Utilizing TOPPAN's cutting-edge technology, GL FILM's high barrier, transparent, non-foil structure, and other features enrich people's lives by making packaging highly functional and more convenient.

As sustainability becomes increasingly essential, TOPPAN USA is actively developing new barrier films to support a sustainable society. These include PE-based and BOPP-based transparent high-barrier films that are ideal for mono-material packaging with outstanding recyclability. TOPPAN's original coating and deposition technologies enable these new barrier films to achieve a breakthrough in the recyclability of flexible packaging.

Silver Sponsor

Windmoeller & Hoelscher Corporation (W&H) is a major supplier of advanced flexographic and gravure printing presses, blown and cast film extrusion systems, multiwall bag-making machines, as well as converting equipment for the flexible packaging industry in North America. W&H's engineering excellence guarantees customized solutions from a single machine order to a turnkey factory. Since its inception, W&H has been granted over 1,633 patents worldwide, including the oscillating haul-off technology, internal bubble cooling, and the OPTIFIL P automatic die control. The company is well known for many industry "firsts," including the introduction of the first CI press in 1954 (OLYMPIA 1275) and the 1997 launch of NOVOFLEX, the industry's first gearless, direct drive, infinitely variable flexo press. In addition to supplying the world's most comprehensive machinery program for the flexible packaging industry, W&H also offers an extensive and reliable service program. W&H service is available "24/7," utilizing a comprehensive multimillion-dollar warehouse to deliver the majority of parts right from our Rhode Island stock. Furthermore, W&H's 200,000-square-foot (18,500 m²) Technology Center in Lengerich, Germany, offers the most advanced training and testing labs for printing, extrusion, and packaging machinery.
