

PATT-23 Call for papers

Theme: Research on STEM Education for Green Technology

The PATT sessions at the Annual ITEA Conferences are meant to bring together those technology educators that are interested in two things:

1. educational research as a support for developing standards, curriculum and materials;
2. an international orientation on technology education developments.

The theme of the PATT sessions at ITEA conferences is always directly related to the main theme of the conference. In 2010 that is: Green Technology and the way STEM education can contribute to that.

For the PATT sessions you are invited to submit papers that have a research orientation and deal with the main theme of the conference. Your paper need not have an international orientation per se, because it is the combination of papers presented during the PATT sessions and the discussions taking place during those that will bring the international orientation.

This call is open to everyone. PATT has no membership, but only aim to bring together researchers, teachers and whoever is interested in technology education developments.

Your papers will be reviewed and published in the electronic Proceedings that will be posted on the ITEA website, where you will find Proceedings of previous conferences (<http://www.iteaconnect.org/Conference/pattproceedings.htm>).

Please, send your abstracts before December 1, 2009 to:

Dr. Marc J. de Vries
Delft University of Technology, the Netherlands
m.j.devries@tudelft.nl.

You will be informed about acceptance within a couple of days.

Registration for PATT goes through the regular [ITEA registration](#).
