

What is **OSHA** looking for?

**IF OSHA SHOWS UP TO INSPECT YOUR WORKPLACE,
THERE ARE SEVERAL KEY THINGS THEY WILL CHECK FOR
TO ENSURE EMPLOYEE SAFETY**

SAFETY PROGRAMS

- You must have annually updated safety programs, customized to your workplace
- These programs cover specific workplace hazards, and how to protect yourself from them

CHEMICAL LABELS & SDS

- You must have proper chemical labels and a comprehensive safety data sheet (SDS) list
- These both need to be legible, accessible to all employees and in the case of SDSs, updated annually

PROPER RECORDKEEPING

- Make sure to record all employee trainings, incident reports, hazard assessments, vaccination declination forms, chemical monitoring test results, and other pertinent paperwork for your industry

PPE STANDARDS

- You must have the proper personal protective equipment (PPE) for the hazards at your workplace
- PPE must be accessible to all employees and must be offered to them at no cost

PROPER SIGNAGE

- Make sure to have clear and accurate signage for workplace hazards, as well as obvious EXIT signs

FIRE SAFETY PROTOCOLS

- You must ensure there are clear walkways, especially near emergency exits, and that fire extinguishers are up to code in case of an emergency

This is not a comprehensive list for all industries; there may be additional requirements for your industry.
