**INNOVATIVE ENERGY STORAGE FOR GRIDS
& DATA CENTERS**

November 3 - 5, 2026
On Center | Syracuse, New York

WHERE THE POWER PROBLEM GETS SOLVED

AI. DATA CENTERS. RELIABLE AND AFFORDABLE POWER.

The demand for electric power by data centers is accelerating at a pace the electric grid was never designed to handle. Access to flexible, high-quality electric power is now the primary constraint on data center development, rivaled only by resistance from consumers concerned about their own electricity costs and power reliability.

Innovative new power technologies, including energy storage, are the key to addressing both concerns.

The Affordable Power™ Conference & Expo is where data center developers, grid operators, and policymakers can see the newest power technologies and learn about their potential.

The purpose of the Expo is to demonstrate that the latest power technologies can meet the complex electricity needs of data centers and other major loads while making the electricity grid cheaper and more reliable for everyone.

If your company is part of this solution, it needs to be here.

WHY THIS EXPO IS DIFFERENT.

This program presents viable solutions to today's power needs. Data center owners, developers, grid operators, and policymakers struggle today with the challenge of how to provide data centers with flexible, high-quality power in a way that makes the grid more robust and less expensive for everyone.

Powering data centers is a multi-trillion-dollar problem.

And it is a problem today. Not next decade. Not even next year. TODAY.

Data center owners, developers, grid operators, system integrators, investors, and government representatives will attend the Affordable Power™ Conference & Expo to identify potential products, technologies, new ideas, suppliers, and partners that can help them solve this problem. They need solutions now. These are real buyers, not browsers.

Who You'll Meet...

- Data center developers and operators
- Utilities and grid operators
- Battery and energy storage innovators
- Power system manufacturers and EPC firms
- Policymakers, regulators, and the U.S. Department of Energy
- Project finance providers and investors

How You'll Meet Them...

- A free-to-attend Expo floor built around a timely, high-interest topic ensures maximum traffic
- The Conference networking app will direct visitors interested in your products to your booth
- Presenting a presentation on the "Solutions Stage" at the Expo will highlight your company
- The Conference adjoining the Expo floor will pull in top decision-makers from government and industry

THIS IS WHERE YOUR BRAND NEEDS TO BE

If your company has technology, products, or expertise that solves the problem of how to power data centers while making the grid more robust, here is how you can stand out:
