

EVERLEDGER

Emerging technology solutions for real world challenges

Member Update Presentation

2019  **NAATBatt**
INTERNATIONAL
ANNUAL MEETING & CONFERENCE

What is Blockchain?

Blockchain is a distributed ledger that maintains a continuously-growing list of records called blocks secured from tampering and revision without the need for a central authority.

- Digitization leads to less admin work and consistent data tracking
- Immediate data access for permissioned parties
- Global and scalable to support worldwide partnerships and communication
- Secure and irrefutable

ABOUT EVERLEDGER

Founded in 2015, Everledger is an independent **emerging technology** enterprise focused on addressing real-world challenges through breakthrough solutions to deliver positive social, economic and environmental impact.

We began with the diamond sector using digital ID and blockchain to identify and track sustainable diamonds from mine to market. **For assets that are not uniquely identifiable we couple blockchain technology with auto-ID and advanced material science to connect the asset to the blockchain.**

Unique to Everledger is our deep industry experience in the sectors we support that provides the dimension and passion to deliver successful solutions.

Company Facts:

- HQ in UK, 5 major offices globally in the **US, UK, Israel, India and Australia** w/75 employees

Awards:

2018: Advance Global Australian Awards - Technology & Innovation (Founder & CEO Leanne Kemp) / Barclays Entrepreneur Awards (Founder & CEO Leanne Kemp) / WEF Tech Pioneer - World Economic Forum Tech Pioneer / IBM Champion (Founder & CEO Leanne Kemp) / Women in IT Awards - Innovator of the Year London (Leanne Kemp)

2017: NTT Data Global Open Innovation Business Contest 5.0 - Winner (London)

2016: Digital Top 50 Awards Presented by Google, Rocket Internet & McKinsey / London Innovators Penrose Award - Innovator of the Year / Asia Insurance Technology Awards (Hosted by Celent) - Best Newcomer

Industries & Markets

Diamonds & Gems

Luxury Goods

Fine Art

Fine Wines & Spirits

Critical Materials
(e.g. Batteries)

Sustainable Materials &
Ethical Chains

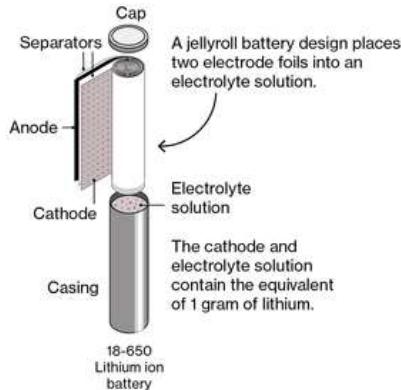

Partners & Clients

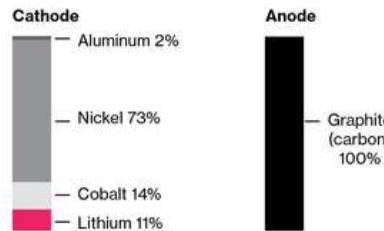

How can we track EVBs throughout the lifecycle?

1. Create a unique IDs for parts and packs
2. Connect these IDs to the internet (Internet of Things)
3. Convenient user interface for interaction among battery lifecycle stakeholders
4. Smart contracts layout rules for stakeholder roles and interactions. They facilitate, verify and enforce the performance of an agreement and/or transaction
 - a. If I am a service facility performing maintenance or repair on a battery, I may be required to upload the maintenance record and scan new parts identification onto the platform
5. As the battery is maintained, salvaged, shipped, repurposed, disassembled and/or sent for recycling, all stakeholders and activities are transparently validated and permanently recorded
