Leading the charge for recycling.™

ABOUT US

- Call2Recycle, a not-for-profit, is the premier battery stewardship, logistics, and recycling program operating with a commitment to safety and environmental excellence.
- Call2Recycle has the unique ability to offer effective and efficient battery management - ranging from household types to e-transport (e-bikes and EVs) – while ensuring compliance with state and national regulations.

2022 – WHAT’S ON THE HORIZON

- Climate action and other market forces are accelerating the adoption of larger batteries.
- **E-Bikes:**
 - PeopleForBikes and Call2Recycle have collaborated to establish the first, voluntary industrywide e-bike battery recycling program in the U.S. – marking this as the first transportation sector united under one battery recycling solution
 - With a commitment from over 40 brands, Call2Recycle will administer the e-bike battery recycling program, launching in February
- **Electric Vehicles:**
 - Pilots underway with OEMs to design programs to safely and compliantly get batteries to processors
 - Recently signed memorandum of understanding (MOU) with Lithion (Quebec, Canada) to collaborate on providing a turnkey full-service management solution for safe and efficient recycling of Electric Vehicle (EV) batteries

Call2Recycle’s goal with the massive growth in e-transport batteries is to make the safe disposal and responsible recycling as seamless as we have for consumer batteries.
