

# Solving eMobility Challenges with A&D Solutions

Presented by Tad Blankenburg

# eMobility Challenges

## Complexity

Battery test systems require multiple components to successfully run a test such as cyclers, chambers, chillers, etc.

## Management

Larger battery labs consist of hundreds of test systems that require facility and data management.

## Expensive

Battery test systems are expensive due to the complexity of the electronics and controls involved.

# A&D Streamlines Hodgepodge Labs

## Flexible Lab Automation & Management Solutions:

Integrates all types of testing equipment made by any manufacturer into one convenient platform.

# A&D's eMobility Solutions

## iTest.BTS

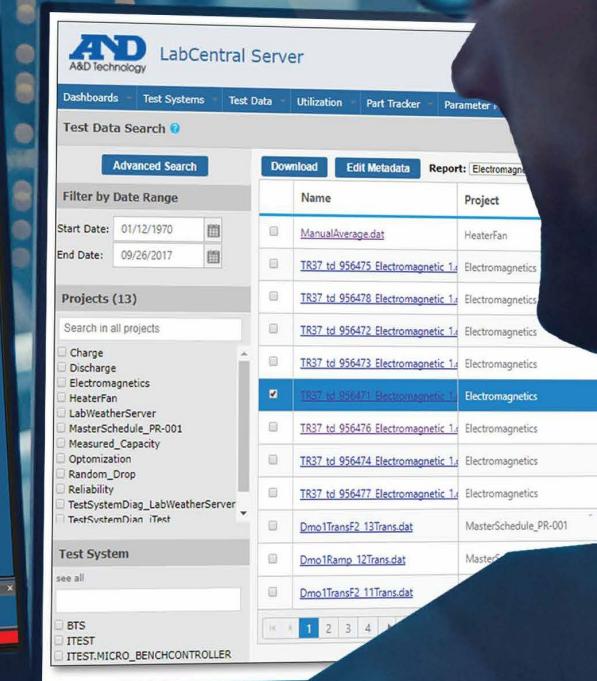

Battery Testing Automation solution that reduces the system to a single interface and incorporates data acquisition.

## LabWorX Suite

Collects and stores data from a collection of test systems into one managed lab.

## HILS

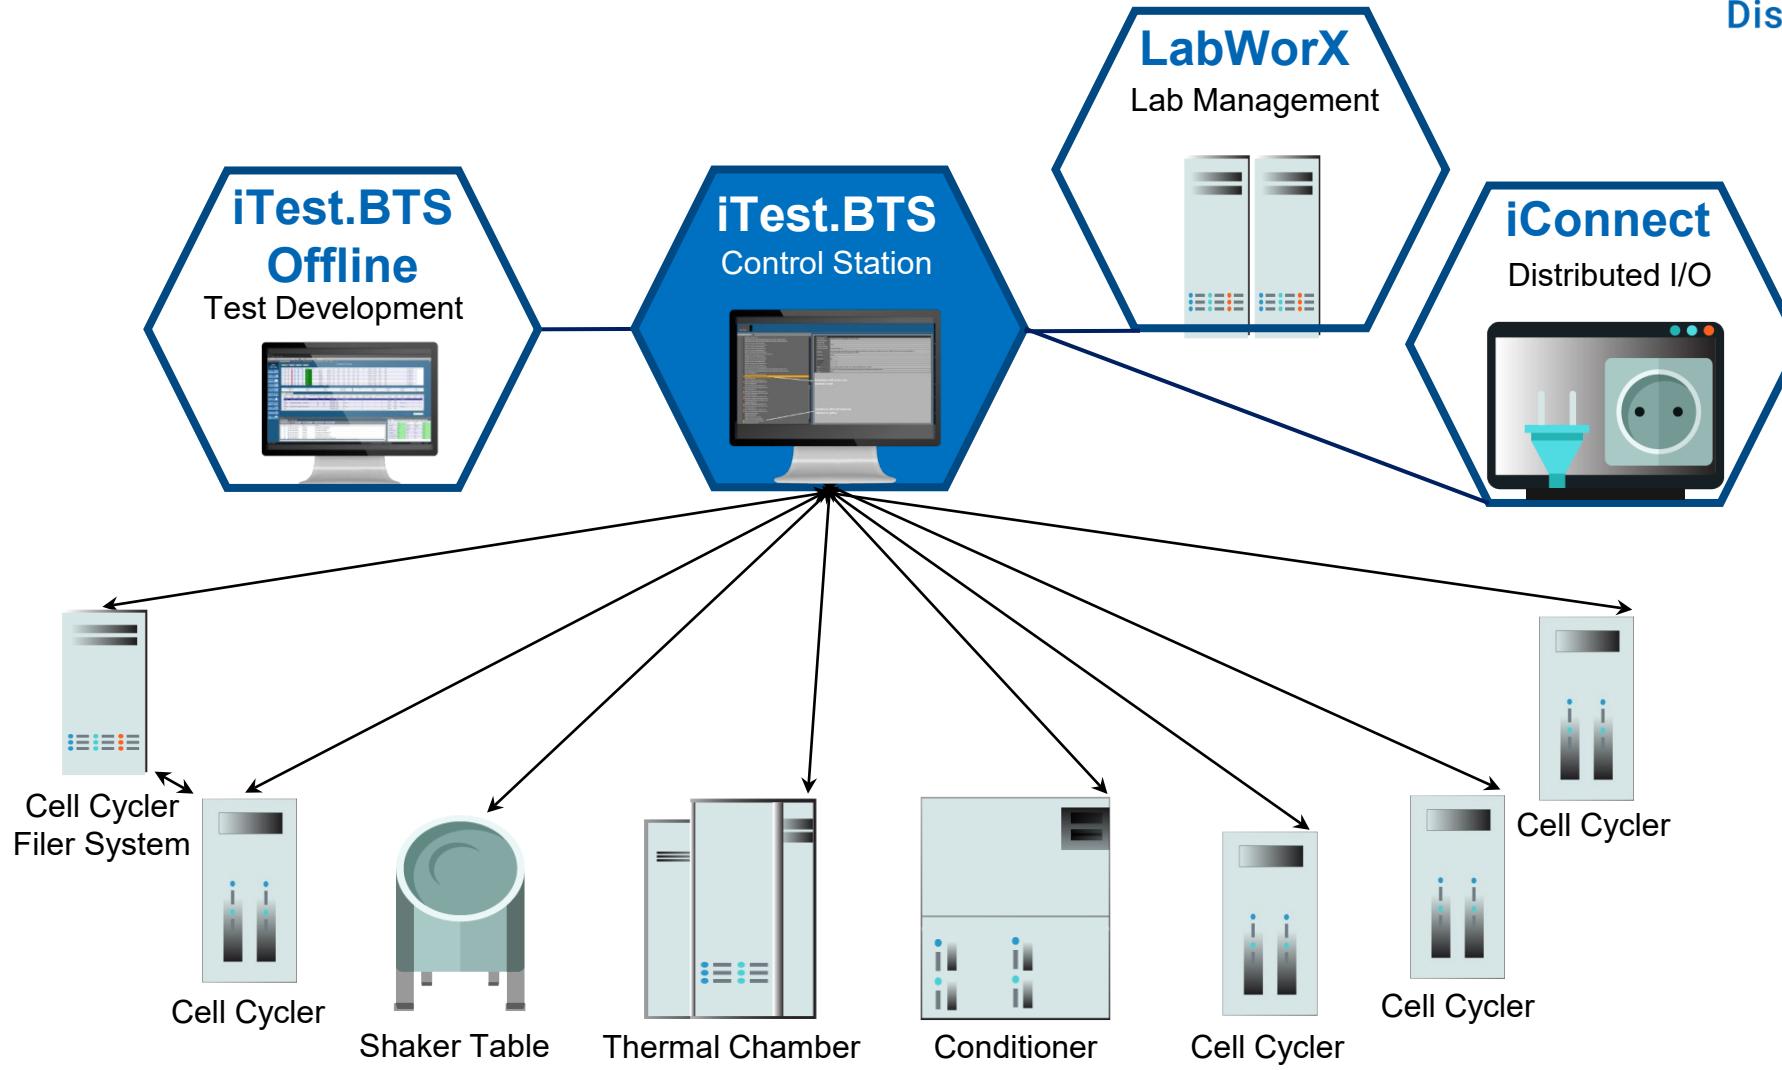

Hardware-in-the-Loop shortens development cycles and reduces the cost of testing.

# iTest BTS Battery Testing Automation

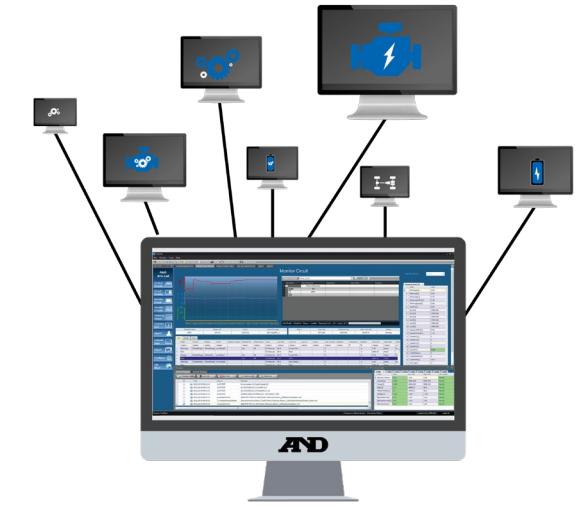

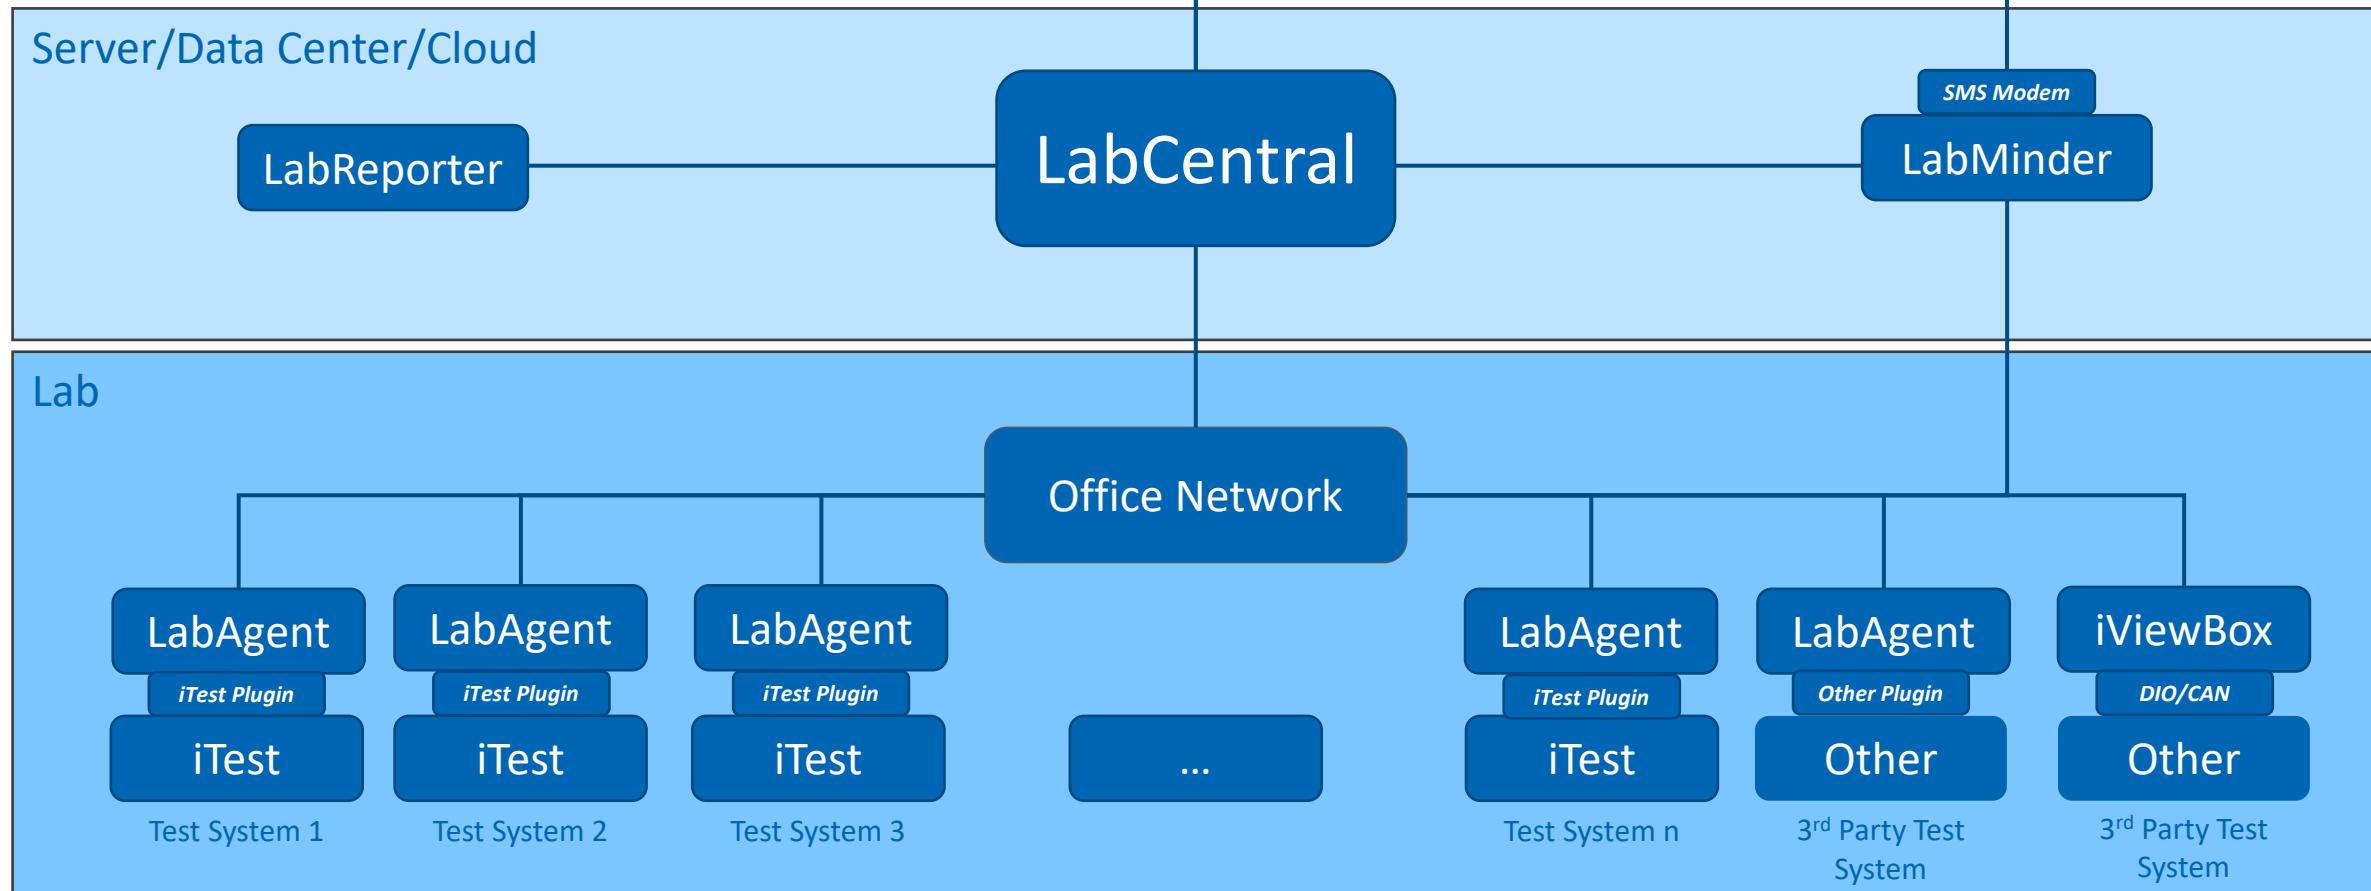

# iTest.BTS Solution

# LabWorX

## Lab Automation & Monitoring

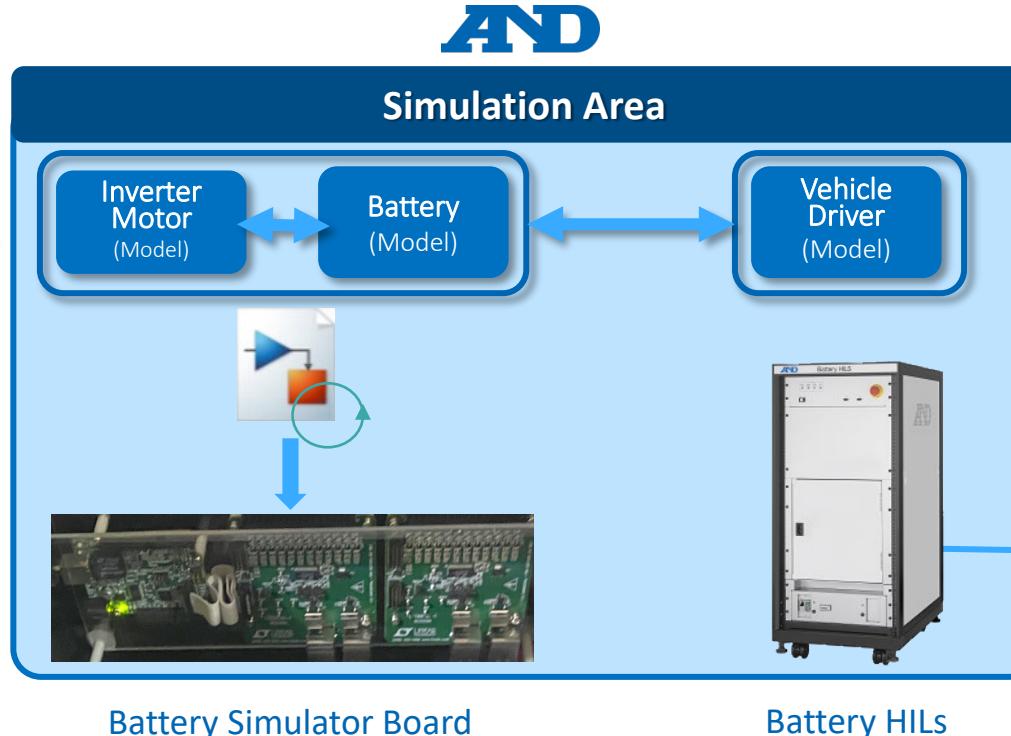

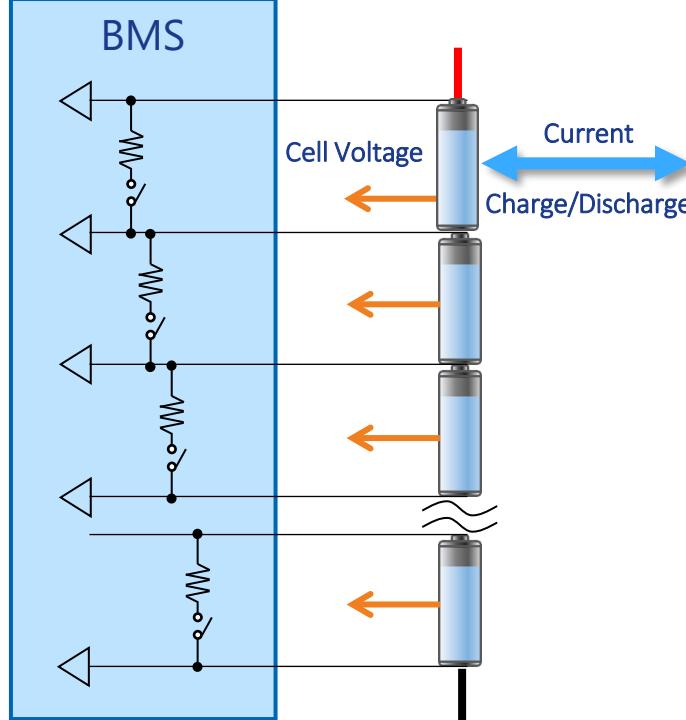

# HIL Simulation eMobility Solutions

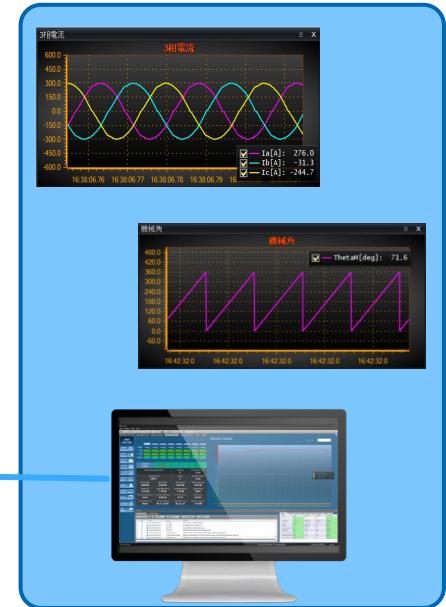

# Battery HILS

Simulate Batteries for Developing and Validating a BMS (Battery Management System) ECU

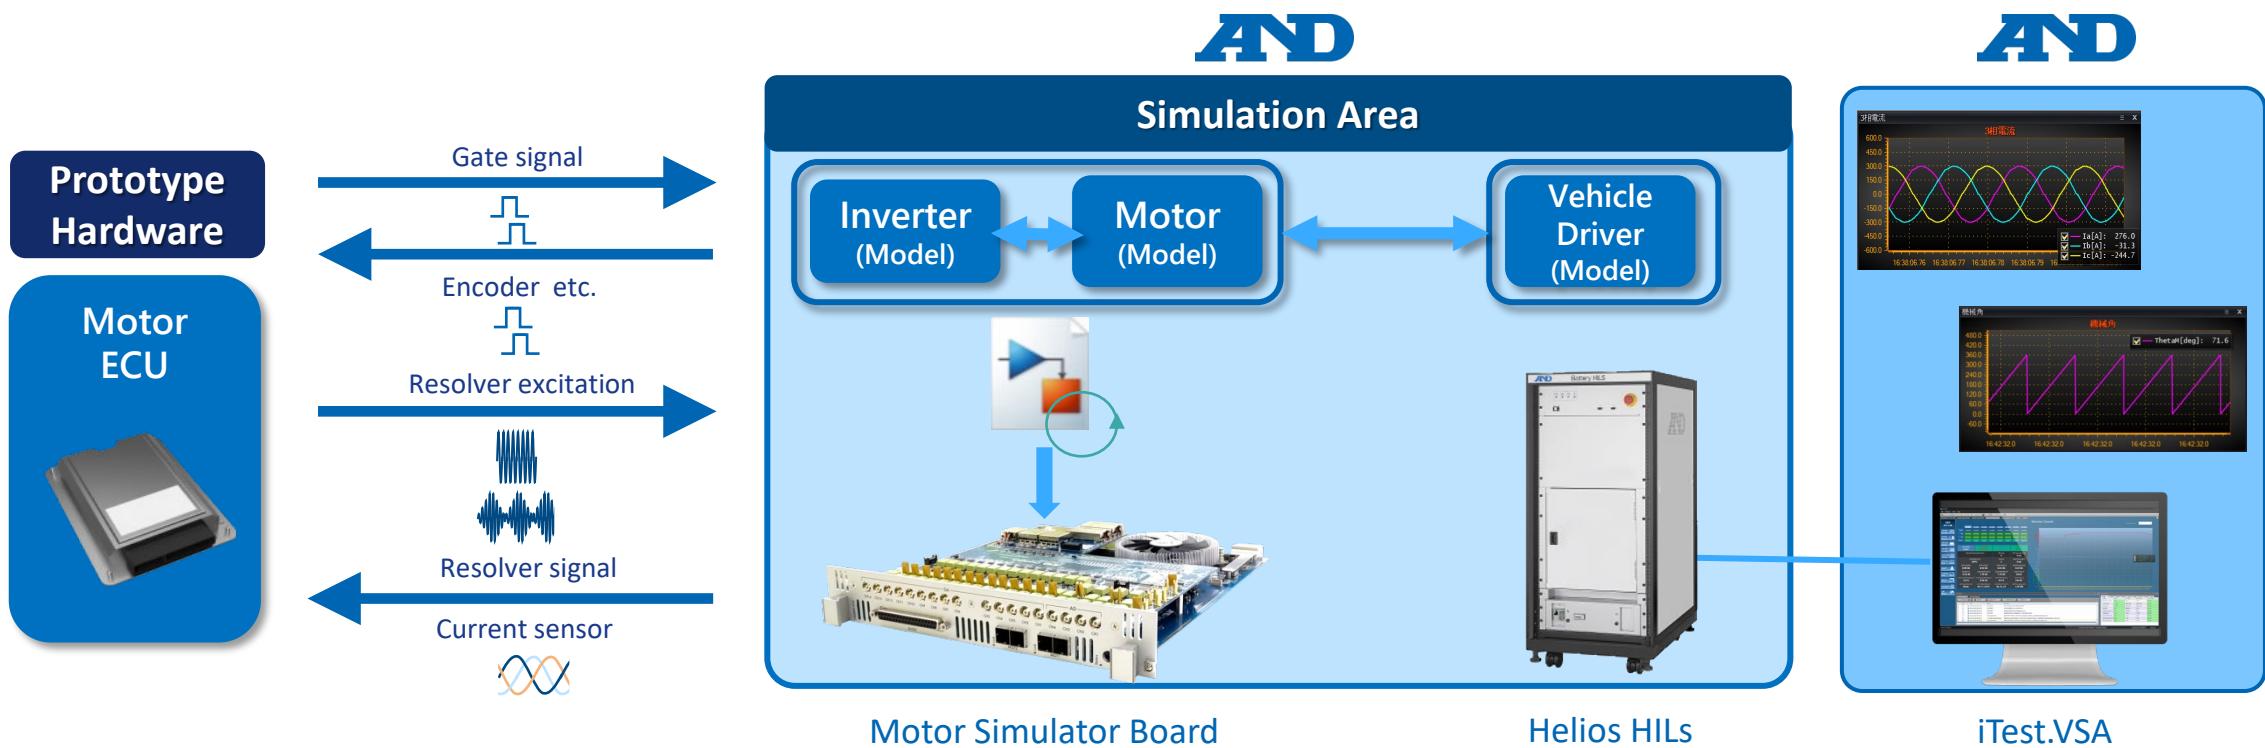

Battery HILs

iTest.BTS

# Motor HILS

## Simulate Motors for Developing and Validating a Motor ECU

# eMobility Installations: 300+ Worldwide

# Thank You
