OPTIMIZE AND INNOVATE

Learning Objectives

- 1 Summarize the current scientific debate and variations in recommendation for breast cancer screening with mammography.
- 2 Define the role of risk assessment and tailored screening paradigms to improve breast cancer screening outcomes.
- 3 Describe newer modalities for breast imaging, including supplements to mammography, with a focus on accuracy of interpretation, along with discussing most up-to-date concepts regarding breast density assessment.
- 4 Recognize different practice patterns, metrics, and challenges pertaining to varying breast imaging practices across the country.
- 5 Explain how other practices organize and administer breast imaging practices at the local level, while contributing to establishing overall practice guidelines at the national level that meet local needs.
- 6 Identify barriers in access for breast imaging care to develop strategies for improved service lines.

Accreditation Information
