

WIN Gero SIG Webinar Proposal - AY26-27

Title: Technology and Older Adults

Description: This panel will explore current evidence on technology use in and around aging, whether that is tech used by older adults or used to serve the older adult population. We'd like to discuss what the research shows, where the evidence is still emerging, and what it means for research, practice, and education.

Format: One-hour panel discussion, hosted by WIN. We're envisioning 3-4 panelists plus a moderator, with time for audience Q&A.

Presenters: Moderator - Jodi Erickson (GeroSIG Chair) or designee

Panelists: Dr. Mustafa Ozkaynak, University of Colorado Anschutz

Dr. Fang Yu, Arizona State University

Dr. Jingyi Li, University of Washington Tacoma

Proposed Learning Outcomes:

1. Examine current trends at the intersection of technology and aging.
2. Evaluate the potential implications of technological innovation for older adults and their care partners.
3. Identify future directions for research, practice, and education related to technology and aging.

Scheduling Requests: Preferred timing is January 2027 if possible
